Portfolio | GitHub | GitHub Projects | LinkedIn | HackerRank | CodeChef

SUMMARY

Motivated and passionate Software Engineer with professional experience at L&T Technology Services (LTTS), supporting engineering workflows for an Intel client engagement. Hands-on experience in Python development and automation, software validation, debugging, issue investigation, backend/full-stack development, REST APIs, databases, and AI-enabled engineering workflows. Contributing to LTTS Agentic IQ through AI-agent development for error-resolution workflows. Strong foundation in Python, C, C++, Java, JavaScript, TypeScript, data structures, algorithms, OOP, SQL, and problem solving. Passionate about learning quickly, building reliable software, solving complex engineering problems, collaborating with teams, and continuously growing as a software engineer.

TECHNICAL SKILLS

- Languages: Python, C, C++, Java, JavaScript, TypeScript
- Core CS: Data Structures, Algorithms, Complexity Analysis, OOP, DBMS, SQL, Problem Solving, Software Engineering
- Backend: Node.js, Express.js, FastAPI, REST APIs, Java Servlets, JSP, JDBC
- Databases: MongoDB, Mongoose, MySQL, Relational Database Concepts
- Frontend: React.js, HTML5, CSS3, Tailwind CSS, Bootstrap, Responsive UI Development
- AI/ML: Generative AI, LLMs, Transformers, RAG, Agentic AI, Machine Learning, LLM Fine-tuning, Evaluation
- Engineering: Python Automation, Software Testing, Functional Validation, Debugging, Issue Triage, Root-Cause Analysis, Technical Documentation, Code Review Fundamentals
- Tools & Accessibility: Git, GitHub, Google Colab, Android Studio, Semantic HTML, Keyboard-Friendly UI Concepts, Accessibility Fundamentals

EXPERIENCE

L&T Technology Services (LTTS) | Associate Engineer | Bengaluru | Present

- Develop Python scripts and automation supporting engineering, product validation, and issue-investigation workflows for an Intel client engagement.
- Work across validation, debugging, legacy/IPU (Intel Product Update) workflows, and structured problem solving; investigate issues and support reliable engineering outcomes.
- Contribute to LTTS Agentic IQ by developing an AI agent for error-resolution workflows, applying LLM and RAG concepts to engineering use cases.
- Apply software development, testing, functional validation, debugging, issue triage, and structured root-cause analysis across hardware/software engineering workflows.
- Completed intensive Python and AI/ML training covering Python, Transformers, LLMs, RAG, fine-tuning, safety, alignment, and evaluation; implemented RAG workflows in Google Colab.
- Recognized as a top performer in recent intensive Python technical training at LTTS.

Arishi Innovation India Pvt. Ltd. | Software Development Intern | Indore | Jan 2025 - Jun 2025

- Worked with Magnolia CMS architecture and application content workflows for the IOA website project; managed events, news, and job modules.
- Performed functional/content validation and QA activities on the Zoopla live platform, supporting issue identification and validation.

Mindpath Tech Private Limited | Intern | Indore | Aug 2024 - Oct 2024

- Completed an internship focused on frontend/web development; worked with HTML, CSS, JavaScript, Bootstrap, React, and database fundamentals.

FeedBox | Web Developer Intern | Indore | Jul 2023 - Dec 2023

- Developed web features using HTML, CSS, and JavaScript while strengthening programming fundamentals in C, C++, and Java.

SELECTED SOFTWARE PROJECTS

StayJi — Full-Stack PG & Stay Finder Platform | GitHub | Live Demo

- Built a full-stack platform using React, Tailwind CSS, Node.js, Express.js, MongoDB/Mongoose, REST APIs, authentication, and role-based access control across user, property-owner, and administrative workflows.

Smart Energy Optimization Agent | Team DASH | LTTS 24-Hour Hackathon | GitHub

- Built an AI-enabled solution analyzing building sensor and energy-consumption data to generate optimization recommendations; developed observation, reasoning, decision-making, and savings/ROI workflows using Python/FastAPI, React, TypeScript, and Node.js/Express; received Special Spot Recognition.

Online Shopping Website | GitHub

- Developed a database-driven e-commerce application using Java Servlets, JSP, MySQL, JDBC, HTML, CSS, and JavaScript.

Pack Your Bag App | GitHub

- Developed an Android application in Java for travel-item reminders and gained hands-on experience with Android Studio through team-based development.

Electric Two-Wheeler Design Competition (ETWDC) | Chennai | Sep 2023 - Feb 2024 | GitHub

- Contributed to web development, vehicle electrification, wiring harness, electronics implementation, and Arduino-based functionality; achieved AIR-7 and 2nd Prize in the Special Award category.

EDUCATION

Bachelor of Engineering in Computer Engineering | Institute of Engineering and Technology, Devi Ahilya Vishwavidyalaya, Indore | 2021 - 2025 | 79%

Higher Secondary School (Class XII) | Advanced Academy | 85.4% | 2021

Secondary School (Class X) | Advanced Academy | 84.6% | 2019

ACHIEVEMENTS, RESEARCH & COLLEGE LEADERSHIP

- 5-Star Python — HackerRank | Top Performer — LTTS Python Technical Training.
- Special Spot Recognition — LTTS 24-Hour Hackathon | AIR-7 and 2nd Prize, Special Award — ETWDC.
- Co-author: "The Effect of AI on Job Roles and Responsibilities in IT Organizations," based on analysis involving 100+ IT professionals.
- College Leadership: Sponsorship Head — FeedBox; Public Relations and Marketing Head — Engineers Without Borders (EWB); Member — NSS Club; Member — Bureau of Indian Standards (BIS) Club.
